

Moin Uddin

Senior Frontend Engineer — React — TypeScript — Fintech Platforms

Kuala Lumpur, Malaysia

moin.uddin314@gmail.com — +60-1137931606

GitHub: <https://github.com/moynuddin> — LinkedIn: <https://linkedin.com/in/moyn-uddin>

Professional Summary

Senior Frontend Engineer with 6+ years of experience designing and delivering scalable, high-performance web applications across fintech, e-commerce, and enterprise platforms. Expert in React, TypeScript, and modern frontend architecture with a strong record of improving performance, maintainability, and development productivity. Experienced in building secure banking applications and developing AI-integrated systems using LangChain.js and vector databases.

Core Competencies

React Development, Frontend Architecture, TypeScript Development, Single Page Applications (SPA), Next.js Applications, Component Driven Development, Responsive Web Design, UI Performance Optimization, State Management (Redux Toolkit, Zustand), REST API Integration, OAuth2 and JWT Authentication, Multi-Factor Authentication (MFA), Scalable Web Applications, Agile Development, Fintech Platforms, Banking Systems, AI Integrated Applications, Retrieval Augmented Generation (RAG), LangChain.js, Vector Databases, Pinecone, LLM API Integration.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, SCSS

Frontend: React 18, Next.js, Angular, Redux Toolkit, Zustand, TailwindCSS, Material UI, Bootstrap

Backend: Node.js, Express.js, REST APIs

AI / LLM: LangChain.js, OpenAI API, Google Gemini API, Pinecone, MongoDB Atlas Vector Search

Testing: Jest, React Testing Library, Playwright

Tools: Git, GitHub, GitHub Actions, Jenkins, Webpack, Vite, NPM, Yarn, VS Code, ESLint

Professional Experience

Senior Frontend Engineer

Aleph Labs (Client: UOB Singapore)

Jul 2025 – Present

- Improved platform maintainability by 40% by leading migration of a monolithic JSP banking platform to React 18 and Material UI.
- Accelerated feature delivery across teams by designing reusable component architecture and shared design system.
- Improved page load performance by 25% through code splitting, lazy loading, and optimized bundle management.
- Collaborated with cross-functional engineering and product teams to deliver secure and scalable banking features.

Senior Frontend Engineer

HR Tag (Client: Maybank)

Sep 2024 – Jun 2025

- Improved application performance by 30% by migrating 15+ legacy class components to modern React Hooks architecture.
- Reduced technical debt by refactoring 2,000+ lines of legacy frontend code improving maintainability and scalability.
- Strengthened platform security by implementing Multi-Factor Authentication (MFA) across transaction entry points.
- Delivered secure banking features by collaborating closely with backend and product teams.

Frontend Developer

Cognizant Technology Solutions

Aug 2021 – Aug 2024

Client: Chewy (E-commerce Platform)

- Reduced production bugs by 95% by implementing automated test suites using Playwright and Jest.
- Improved sprint delivery speed by 15% by leading a 3-member frontend engineering team.
- Improved application response time by 25% through performance profiling and frontend optimization.
- Developed scalable React UI modules supporting high traffic e-commerce systems.

Client: Qatar Digital Bank

- Reduced feature development time by 30% by building reusable React component libraries.
- Developed secure loan lending portal using React and integrated REST APIs.
- Improved platform usability by designing responsive UI across devices.

Software Engineer

Centre for Development of Advanced Computing (C-DAC)

Oct 2019 – Jul 2021

- Improved system performance by 20% by optimizing Angular-based frontend applications.
- Built responsive UI modules using Angular, JavaScript, and Bootstrap for national fare collection systems.
- Delivered government-scale infrastructure software by collaborating with cross-functional teams.

AI and Side Projects

Zentra — AI Powered Web Performance Auditor

- Developed AI-powered web performance auditing platform analyzing Core Web Vitals including FCP and CLS.
- Integrated Playwright automation with Mistral LLM via Ollama to generate human readable performance optimization reports.
- Built interactive analytics dashboard using React, ShadCN UI, and Recharts.

AI Powered Q&A Application (RAG + LangChain.js)

- Built Retrieval Augmented Generation system using Next.js, LangChain.js, Pinecone, and Google Gemini API.
- Enabled semantic document search by generating vector embeddings for PDF knowledge bases.
- Implemented streaming chat interface using Vercel AI SDK for real-time responses.

TalkTube RAG

- Built AI assistant that processes YouTube transcripts and generates embeddings using LangChain.js.
- Enabled question answering over long-form video content using Pinecone vector database.

Education

Bachelor of Technology (B.Tech) — Computer Science

Dr. APJ Abdul Kalam Technical University, Lucknow, India

2014 – 2018

Relevant Coursework: Artificial Intelligence, Machine Learning, Data Structures, Algorithms, Databases, Operating Systems, Computer Networks

Certifications and Achievements

- LangChain.js for Developers — LinkedIn Learning (2025)
- Solved 350+ algorithmic problems on LeetCode demonstrating strong problem solving and data structures knowledge
- Top 10 Finalist — Cognizant Internal Hackathon
- Recognized as Top Performer by client stakeholders at Cognizant
- Hacktoberfest open source contributor to Material UI repository
